

Anti- Crimean-Congo hemorrhagic fever (CCHF) Human IgM ELISA Kit

Salient Features of the Technology:-

- The technology is an indigenously developed ELISA kit.
- The ELISA uses inactivated CCHF antigen and hence can be used at BSL2 level settings.
- It can be efficiently used for qualitative detection of IgM antibody in serum of suspected CCHF patient.
- The developed ELISA kit is also cost effective.
- It is useful in providing CCHF diagnosis in case of an epidemic outbreak situation.
- It has been developed by National Institute of Virology, Pune (an ICMR institute).
