

Herbal Immersion Oil for Microscopy

Salient features of the technology:

- The product is herbal immersion oil for microscopy as an alternative to conventional petroleum based immersion oils.
- It has been derived from plants and hence is absolutely safe for human use and also environment-friendly.
- This immersion oil is easy to prepare and cost-effective.
- It is also non reactive, biodegradable and does not damage the immersion oil objective with its frequent use.
- This invention has the potential to be scaled up.
- It is developed by the National Institute of Malaria Research, Delhi, an institute of ICMR.
