DRAFT

31 **Performance evaluation protocol for Human Metapneumovirus real-time PCR kit**

32 **I. Background:**

33 CDSCO and ICMR, New Delhi, have aimed at facilitating the availability of Quality-Assured
34 Diagnostics kits appropriate for use in India. Hence the following guidelines shall establish the
35 uniformity in performance evaluation of in-vitro diagnostic kits (IVD). The performance
36 evaluation is to independently verify the manufacturer's claim regarding in-vitro diagnostic kit
37 (IVD) performance.

38 This recommendation focuses on the laboratory performance evaluation of Human
39 Metapneumovirus (hMPV) virus real time PCR kit. All clinical samples tested in the study should
40 be evaluated in accordance with the candidate test's instructions for use.

41

42 **II. Purpose:**

43 To evaluate the performance characteristics of hMPV real-time PCR kits in the diagnosis of hMPV
44 infection/ disease.

45 **III. Requirements:**

- 46 1. Supply of kits under evaluation (Along with batch/lot No. Expiry & required details). If the
47 kit to be evaluated works in a closed system format, the manufacturer needs to supply
48 the required equipment.
- 49 2. Evaluation sites/laboratories (With required equipment)
- 50 3. Reference test kits
- 51 4. Characterised Evaluation panel
- 52 5. Laboratory supplies

53 **IV. Ethical approvals:**

54 Exempted from Ethics approval as per ICMR's Guidance on Ethical Requirements for Laboratory
55 Validation Testing, 2024. A self-declaration form as provided in ICMR guidelines to be submitted
56 by the investigators to the institutional authorities and ethics committee for information.

57 **V. Procedure:**

- 58 1. **Study design/type:** Diagnostic accuracy study using clinical/spiked samples
- 59 2. **Preparation of Evaluation sites/laboratories:**
60 **Identified IVD kit evaluation laboratories should be well-equipped and establish their**
61 **proficiency through ALL of the following:**

62 A. Accreditation from NABL for at least one of the Quality management systems for at least one
63 respiratory viral pathogen molecular testing (NABL accreditation for testing Lab / calibration
64 lab as per ISO/IES 17025, Medical Lab as per ISO 15189, PT provider as per ISO/IEC 17043), or
65 CDSCO approved Reference laboratory.

66 B. Staff training: All the staff involved in hMPV virus IVD evaluation should undergo hands-on
67 training and competency testing on following

68 ➤ Preparation & characterization of reference sample panel (at least 2 staff)

69 ➤ Handling of hMPV RT-PCR kits received for performance evaluation
70 (Verification/Storage/Unpacking etc).

71 ➤ Testing, interpreting, recording of results & reporting

72 ➤ Data handling, data safety & confidentiality

73 **3. Preparation of hMPV RNA evaluation panel**

74 A well characterised panel of hMPV positive human samples is a critical requirement for
75 evaluation of these RT-PCR IVD kits. A statistically significant number of clinical samples should
76 be used for the evaluation.

77 The sample type for hMPV detection is nasopharyngeal/oropharyngeal swab. If a kit claims to
78 detect hMPV across several sample types, attempt should be made to evaluate the assay across
79 all the sample types. In case all the sample types mentioned in the IFU are not available with the
80 lab, the performance evaluation report should clearly mention the sample type against which the
81 kit is evaluated. There should be no ambiguity about the type of sample used for evaluation.

82 **4. RNA extraction**

83 RNA extraction should be performed using standard techniques. If the manufacturer of the index
84 test recommends a specific RNA extraction kit, the same needs to be provided by the
85 manufacturer if the evaluation lab is unable to procure the same.

86 **5. Real-Time PCR System**

87 PCR should be performed using IVD-approved machines. If any equipment(s) is specified in the
88 IFU of the index test, it should be used for the evaluation, and it should be provided by the
89 manufacturer if not available within the lab's IVD evaluation scope.

90 Real-time closed systems/devices awaiting evaluation should be provided by the manufacturer
91 along with all necessary components, supplies and reagents.

92 **6. Internal control/Extraction control**

93 The index test must have an internal control (housekeeping gene), with or without an extraction
94 control (RNA added before extraction to a sample).

95 **7. Reference assay:**

96 FDA approved real-time PCR assay/ ICMR-NIV Pune in-house Real Time PCR Assay should be used
97 as the Reference Assay.

98 All positive samples should be confirmed positive by the reference assay.

99 All negative samples should be confirmed negative by the reference assay.

100

101 **8. Sample size for performance evaluation:** Sample size is calculated assuming 95%
102 sensitivity and specificity of the index test, 95% confidence level, absolute precision of 5% and
103 $\leq 5\%$ invalid test rate. A minimum of 77 (rounded to 80) positive clinical samples and a minimum
104 of 77 (rounded to 80) negative clinical samples are required for performance evaluation.
105 However, for negative samples, a minimum of 115 specimens are suggested to account for a
106 rigorous cross reactivity panel.

107

108

109 **9. Sample panel composition:**

110 **A. Human samples**

111 **A.1 Positive samples (n=80):** Clinical samples positive by the reference real-time PCR
112 assay

113 A.1.1 Strong positive (Ct value < 25) = 20 samples

114 A.1.2. Moderate positive (Ct value between 25-30) = 40 samples

115 A.1.3 Weak positive (Ct value $> 30-35$) = 20 samples

116 Note:

117 If possible, attempt should be made to include all lineages of hMPV in the positive sample panel.

118

119 **A.2 Negative samples (n=115):** All negative samples should be negative by reference real-
120 time PCR assay. Distribution of the negative samples should be as follows:

121 A.2.1 NP/OP swab from individuals with respiratory infection that are negative for hMPV
122 RNA = 30 samples

123 A.2.2 NP/OP swab from apparently healthy individuals with no respiratory symptoms =
124 20 samples

125 A.2.3 Cross reactivity panel (Table 1): Samples negative for hMPV RNA but positive for
126 other common respiratory viruses = 65 samples

HMPV IVD Performance Evaluation Protocols
ICMR-CDSO/IVD/GD/PROTOCOLS/03/2024

127

Table 1: Cross reactivity panel for performance evaluation of HMPV real time PCR kit

S.N.	Pathogen	Minimum no. of positive samples needed (n=65)	Additional comments
i.	RSV A	5	In case adequate number of one RSV type is unavailable, supplement with the available RSV type
ii.	RSV B	5	
iii.	Measles	5	-
iv.	Mumps	5	Buccal swab is the preferred sample type for Mumps, and the same (or throat swab) should be used for evaluation
v.	Seasonal Influenza A (H1N1pdm09 and H3N2)	10 (5 of each)	-
vi.	Seasonal Influenza B (Victoria, with/without Yamagata)	5	-
vii.	SARS-CoV-2	5	-
viii.	Respiratory Adenovirus	5	Representation from all respiratory types is desirable
ix.	Human Respiroviruses 1 and 3, Human Rubulaviruses 2 and 4	5	Representation from all types is desirable
x.	Rhinovirus	5	In case samples available with the lab are not typed into Rhinovirus and non-Rhinovirus Enteroviruses, please use 10 such samples to represent these 2 pathogens
xi.	Enterovirus	5	

HMPV IVD Performance Evaluation Protocols
ICMR-CDSO/IVD/GD/PROTOCOLS/03/2024

xii.	Seasonal coronaviruses	3	OC43 AND 229E
xiii.	Cytomegalovirus	2	Lower respiratory specimen positive for CMV is acceptable

128

129 *If available, samples positive for relevant bacterial pathogens and other relevant viruses*
130 *(with which majority of the population is likely to be infected), should also be included in*
131 *the cross-reactivity panel.*

132

133 **10. Evaluation method:**

134 The index test and the reference assay should be run simultaneously on the sample panel,
135 and results should be recorded.

136 **11. Test reproducibility**

137 **A. Sample size for lot-to-lot reproducibility**

138 Three lots of an assay should be evaluated. Sample size for lot-to-lot reproducibility should
139 be as follows:

- 140 • First lot of the assay: should be tested on statistically significant number of positive
141 and negative samples as calculated in the protocol.
- 142 • Second lot of the assay: should be tested on 25 samples (15 positive samples
143 comprising 10 low positive **AND** 5 moderate/high positive samples, and 10 negative
144 samples).
- 145 • Third lot of the assay: should be tested on 25 samples (15 positive samples comprising
146 10 low positive **AND** 5 moderate/high positive samples, and 10 negative samples).
- 147 • There should be no lot-to-lot variation.

148

149 Refer the flowchart below (Fig. 1):

Fig.1: Sample size for Lot-to-lot reproducibility

150

151

152

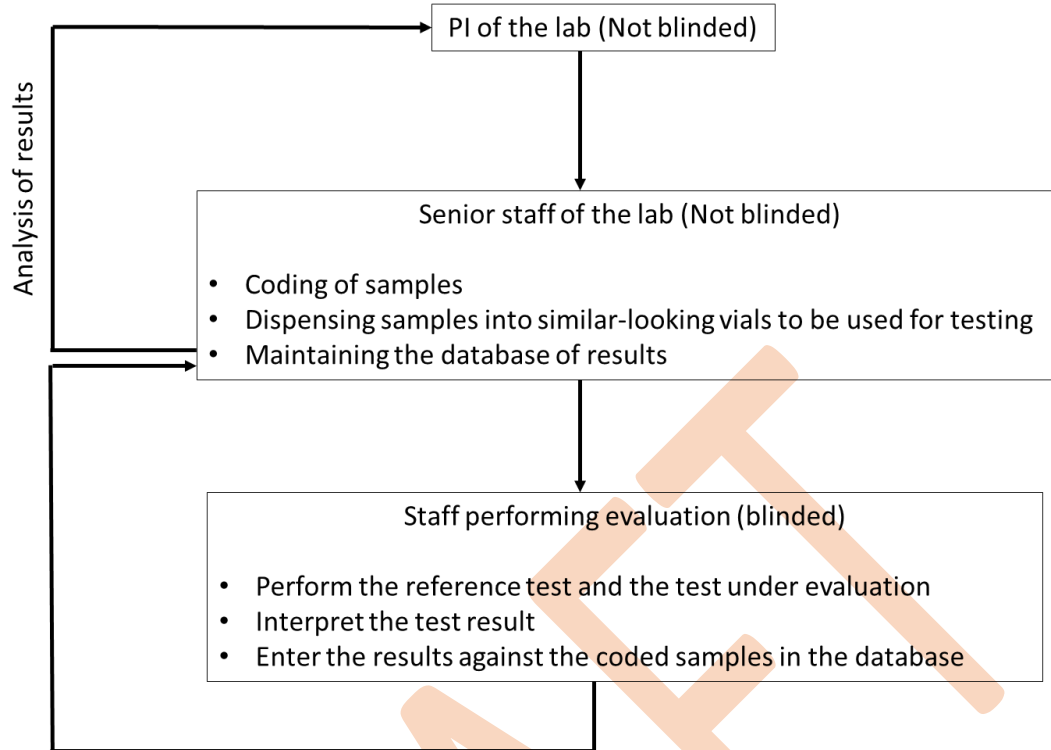

153 **12. Blinding of laboratory staff**

154 To ensure rigor of the evaluation process, laboratory staff performing the evaluation
155 should be blinded to the status of the clinical samples. The PI of the evaluation exercise
156 should remain unblinded, i.e., privy to the status of the samples. Another senior
157 laboratory staff selected by the PI may remain unblinded and carry out coding of samples
158 and dispensing them into similar-looking vials to be used for testing, and maintaining the
159 database of results. Staff performing the reference test and the test under evaluation,
160 interpretation of the test result, and entering the results against the coded samples in the
161 database, should remain blinded to the status of samples till the completion of evaluation.
162 The data should be analyzed only by the PI of the evaluating lab. Refer to Fig. 2.

163

164 Fig.2: Blinding in evaluation exercise

HMPV IVD Performance Evaluation Protocols
ICMR-CDSCO/IVD/GD/PROTOCOLS/03/2024

165

166

167

168 **13. Acceptance Criteria**

169 Expected sensitivity: $\geq 95\%$

170 Expected specificity: $\geq 98\%$

171 Cross reactivity with other viruses as outlined in the negative sample panel: Nil

172 Invalid test rate: $\leq 5\%$

173

174 **13. Publication Rights:**

175 The PI(s) of the evaluating labs shall retain publication rights of the evaluation as lead author(s).

176

177 **After following due procedure as defined in this document, once any kit is found to be Not of**
178 **Standard Quality, thereafter, no request for repeat testing of the same kit will be acceptable.**
179 **Any request of re-validation from the same manufacturer for the same test type will only be**
180 **entertained if valid proof of change in the kit composition is submitted.**

HMPV IVD Performance Evaluation Protocols
ICMR-CDSO/IVD/GD/PROTOCOLS/03/2024

- 219 ○ Sensitivity, specificity
- 220 ○ Performance: **Satisfactory / Not satisfactory**

221 *(Sensitivity and specificity have been assessed in controlled lab setting using kits provided by the manufacturer from*
222 *the batch mentioned above using sample. Results should not be extrapolated to other sample types.)*

223 **Disclaimers**

- 224 1. This validation process does not approve / disapprove the kit design
- 225 2. This validation process does not certify user friendliness of the kit / assay

226 **Note:**

227 This report is exclusively for Human Metapneumovirus..... Kit (Lot No.....) manufactured by
228 (supplied by)

229 The kit has been validated against the pathogen (as a whole) with statistically significant sample size, and
230 NOT against different lineages of the pathogen.

249 **Annexure-1: Information on Operational and Test Performance Characteristics Required from**
250 **Manufacturers**

251 The manufacturer should provide the following details about the IVD:

- 252 1. Instructions for Use
- 253 2. Scope of the IVD: to diagnose hMPV.
- 254 3. Intended Use Statement
- 255 4. Principle of the assay
- 256 5. Intended testing population (cases of ARI/ILI/SARI)
- 257 6. Intended user (laboratory professional and/or health care worker at point-of-care)
- 258 7. Lot/batch No.
- 259 8. Date of manufacture
- 260 9. Date of Expiry
- 261 10. Information on operational Characteristics
 - 262 i. Configuration of the kit/device
 - 263 ii. Requirement of any additional equipment, device
 - 264 iii. Requirement of any additional reagents
 - 265 iv. Operation conditions
 - 266 v. Storage and stability before and after opening
 - 267 vi. Internal control provided or not
 - 268 vii. Quality control and batch testing data
 - 269 viii. Biosafety aspects- waste disposal requirements
- 270 11. Information on Test Performance Characteristics
 - 271 i. Type of sample-NP/OP swab, other respiratory specimen
 - 272 ii. Volume of sample
 - 273 iii. Any specific sample NOT to be tested
 - 274 iv. Any additional sample processing required

HMPV IVD Performance Evaluation Protocols
ICMR-CDSO/IVD/GD/PROTOCOLS/03/2024

- 275 v. Any additional device/consumable like sample transfer device, pipette, tube, etc required
- 276 vi. Name of analyte to be detected
- 277 vii. Pathogens targeted by the kit
- 278 viii. Time taken for testing
- 279 ix. Time for result reading and interpretation
- 280 x. Manual or automated(equipment)reading
- 281 xi. Limit of detection
- 282 xii. Diagnostic sensitivity
- 283 xiii. Diagnostic specificity
- 284 xiv. Stability and reproducibility
- 285 xv. Training required for testing
- 286 xvi. If yes, duration
- 287 xvii. Details of Cut-off and /or Equivocal Zone for interpretation of test
- 288 xviii. Interpretation of invalid and indeterminate results to be provided
- 289 xix. It is recommended to provide data demonstrating the precision

290

291 *Please mention “Not applicable” against sections not pertaining to the kit.
